

Executive 70C-6 MC

Executive
FILLER METALS

A high performance metal cored wire second to none.

Executive 70C-6 MC is the latest generation of low-fuming carbon steel metal cored wire designed to improve welder productivity and help reduce welding costs. Minimal, easy to remove silicon islands further enhance clean up.

This is a premium wire that has excellent wetting characteristics and will produce smooth weld beads with uniform fusion. Highly consistent with great weldability intended for single or multi-pass welding in various steel weldments and fabrications. This wire is ideal for pulse welding and can be used with a variety of high argon shielding gases and has great mechanical properties with low hydrogen content.

Executive 70C-6 MC promotes a cleaner work environment and reduces overall welding costs in the process. Shipped with actual CMTR's that include certification to CWB and AWS D1.8 for critical seismic applications.

Executive 70C-6 MC Advantages

- Superior productivity vs. solid wire
- Excellent mechanical properties (H4)
- Low fume characteristics
- Easily removed silicon islands
- For seismic applications
